AGRICULTURAL COLLEGE, LINCOLNCopy of Report of Official Tractor Test No. 260REPAIRS AND ADJUSTMENTS

During the rated load drawbar test the tractor stopped three times. The air temperature at the time of the first stop was 103° F, at the second 107° F and at the third 110° F. The temperature of the fuel in the fuel tank at the time of the first stop was 120° F. The initial boiling point of the fuel used was 136° F. These operating conditions indicate that the stops were due to vapor lock.

REMARKS

All results shown on page 1 of this report were determined from observed data and without allowances, additions or deductions. Tests B and F were made with carburetor set for 100% maximum horsepower. These figures were used in determining the ratings recommended by the A.S.A.E. and S.A.E. tractor rating codes. Tests C, D, E, G and H were made with an operating setting of the carburetor (selected by the manufacturer) of 99.6% of maximum horsepower.
